Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11, drawn to a device, classified in class 435, subclass 287.2.
 - II. Claims 12-18, drawn to a method for conducting a biochemical or chemical process; claims 22-29, drawn to a process for carrying out biochemical protocols on at least one sample; and claims 30-34, drawn to a process for carrying out in continuous flow at least one temperature cycle on a solution containing at least one sample, classified in class 436, subclass 183.
 - III. Claims 19-21 and 35-51, drawn to a process for amplifying nucleic acids, classified in class 435, subclass 91.2.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product can be sued in the process of Group III.
3. Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the device of Group I can be sued in the process of Group II.

Art Unit: 1655

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Specification

7. A substitute specification that includes the claims is required pursuant to 37 CFR 1.125(a) because the top margin is insufficient for the insertion of retention tabs to be placed without the deletion of text upon the creation of holes. Applicant is urged to consider having a top margin of about 1.25 inches or greater.

A substitute specification filed under 37 CFR 1.125(a) must only contain subject matter from the original specification and any previously entered amendment under 37 CFR 1.121. If the substitute specification contains additional subject matter not of record, the substitute specification must be filed under 37 CFR 1.125(b) and must be accompanied by: 1) a statement that the substitute specification contains no new matter; and 2) a marked-up copy showing the

amendments to be made via the substitute specification relative to the specification at the time the substitute specification is filed.
